VoiceMap™ teams up with Xstrata Coal on Incident Report training

Imagine listening to a comprehensive and engaging audio program that explains how to carry out a procedure correctly. Then you do a knowledge assessment that shows how well you understood the training and these results are forwarded to your manager. The VoiceMap™ system provides an excellent audit trail of OHS training and evaluation. It frees up valuable staff time by enabling training to be available when staff and contractors need it 24/7. It is a proven and highly effective learning method – VoiceMap™ is ideal for procedures and delivering induction training. The audio files are customised to ensure that the content is meaningful and relevant – they are quick to develop and easy to keep current. Consistent, repeatable and on demand – VoiceMap™ is the future of workplace learning.

Using VoiceMap™ at Xstrata has provided a cutting edge approach in training and risk management.

I definitely thought that it beats sitting in a classroom with everyone going through the training.

It's an easier way to learn.

The audio is at a good pace and easy to follow.

If you missed something or someone interrupted you – you could go back and pick it up again.

You can review what you didn't know and repeat what you're not sure of... you really know what you know and what you don't know.

I thought that you would be interested in this!
